## Basic instructions

Use tape to place the stencil on the pumpkin in the desired location. You will need a small cutting tool such as a small knife, an awl or a small screwdriver. Use your cutting tool to trace along the dotted lines. It's best to make small dots or shallow cuts to outline the shape. Once you've carved the pumpkin with the template, remove the paper. For odd shapes, it's better to cut several small pieces, rather than trying to make one continuous piece. Insert the hardware from the blog into the pumpkin, show off and enjoy. Happy Halloween!
