Example of worksheet

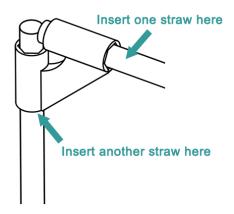

Make a spray

Materials:

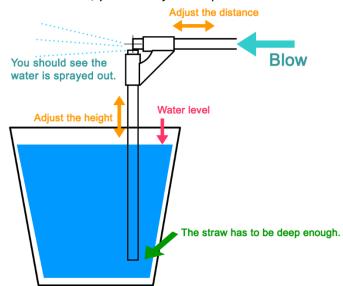

- 1. Two straws
- 2. A 3D printed body
- 3. A empty cup

Instructions:

1. Insert the straws into the two holes to make a spray.

- 2. Fill the cup with water.
- 3. Put one end of the straw into the water.
- 4. Hold the spray's body.
- 5. Blow air to the other end of the spray.
- 6. If the spray does not come out, you can adjust the position of the straws.

Questions:
1. Does the water level change when you are blowing air into the straw?
2 M/bat will you do with this thing?
2. What will you do with this thing?
3. Can you explain why the water is coming when you are blowing?
